

LEADERSHIP INTELLIGENCE PLATFORM

One-to-one coaching, at software scale.

The most effective form of leadership development is sustained coaching by an experienced practitioner. It has never scaled. We are building the agent system that makes it scale — a platform that diagnoses, plans, tutors, simulates and evaluates, continuously, for every leader in an organisation.

MULTI-AGENT ORCHESTRATION

ADAPTIVE ASSESSMENT

BEHAVIOURAL ANALYTICS

BUILT IN MALAYSIA

Billions spent on development. Very little behavioural change.

Organisations invest heavily in leadership development, yet most interventions remain static, generic and disconnected from real workplace challenges. Conventional programmes rely on classroom sessions, video libraries and standardised e-learning that cannot adapt to an individual's leadership style, emotional intelligence, competency gaps or organisational context.

CONSTRAINT

Coaching works. Coaching doesn't scale.

Ongoing coaching by experienced practitioners is the most effective approach available — and it is costly, difficult to scale, and out of reach for most professionals and SMEs.

SUBSTITUTES

Generic AI misses the domain.

Existing AI coaching and learning tools focus on productivity or generic professional development. None combine leadership coaching, emotional intelligence, behavioural assessment and strategic planning in one system.

CONSEQUENCE

No line of sight into capability.

Development stays fragmented, behaviour barely shifts, and leadership capability across individuals and teams remains invisible to the people responsible for succession.

OPENING

Agents change the unit economics.

A coordinated set of specialised agents can carry the diagnostic, curricular and rehearsal load that previously required a human practitioner per learner — at the marginal cost of software.

Already delivered by hand. Now built to scale.

The platform is not a new methodology. It is the digitisation of engagements Leadership Launchpad already delivers to enterprise clients — diagnostic-led, tailored to organisational priorities, and proven in high-stakes environments. Each agent in the system carries a part of work a practitioner does today.

DIAGNOSTIC

Leadership Intelligence Diagnostic & Alignment

Clarity before capability building. Before developing leaders, an organisation has to understand how they think, decide and lead.

- Leadership diagnostics (IFA / EFA)
- Individual or cohort assessment
- Executive-level debrief sessions
- Strategic development roadmap

FORESIGHT

Strategic Foresight & Leadership Visioning

Direction under uncertainty. Leadership requires more than planning — it requires foresight to navigate volatility and rapid change.

- Scenario thinking
- Navigating AI-driven disruption
- Leadership team alignment on direction

PRESENCE

Executive Presence & Communication Excellence

Leadership effectiveness is amplified — or limited — by how leaders communicate, influence and carry themselves.

- Influence and strategic communication
- Credibility under pressure
- High-impact presentation and engagement

Psychology & EI

Applied emotional intelligence and regulation under pressure.

Strategy & Execution

Translating strategy into execution and governance.

Decision & Foresight

Structured decision frameworks and scenario planning.

Communication

Executive presentations and business writing.

Assessments

IFA/EFA, emotional intelligence assessment and DISC profiling.

Team Alignment

Leadership retreats and alignment workshops.

PHASE 1 DIAGNOSE

Assess capability, identify gaps and align development with business priorities. In the platform, this is the assessor.

PHASE 2 DEVELOP

Targeted workshops, coaching and applied real-world learning. In the platform, this is the planner and tutor.

PHASE 3 TRANSFORM

Behavioural change and sustainable capability development. In the platform, this is the simulator and evaluator.

Five specialised agents. One orchestrator.

This is not a chat wrapper. An orchestration framework coordinates purpose-built agents, each responsible for one part of the coaching relationship, grounded in proprietary competency frameworks rather than open-web generality.

ASSESSOR	PLANNER	TUTOR	SIMULATOR	EVALUATOR
Diagnoses baseline leadership and emotional intelligence competency through adaptive assessment, then keeps re-reading the leader as they develop.	Generates an individual curriculum mapped to the leader's role, gaps and organisational context — not a course selected from a fixed catalogue.	Delivers interactive conversational lessons and real-time coaching for live workplace, leadership and interpersonal situations.	Runs realistic scenario simulations and role-plays, including spoken rehearsal, so practice happens before the high-stakes conversation.	Scores open responses against rubrics, returns corrective feedback in real time, and certifies competency once mastery is demonstrated.

RAG CURATED LEADERSHIP KNOWLEDGE BASE

KNOWLEDGE TRACING DRIVES CURRICULUM SEQUENCING

NLP RUBRIC-BASED OPEN-RESPONSE SCORING

SPEECH SPOKEN ROLE-PLAY, BOTH DIRECTIONS

PDPA ENCRYPTED IN TRANSIT AND AT REST

The moat is the practice, not the model.

Anyone can call a frontier model. What cannot be copied quickly is decades of leadership practice encoded into competency frameworks, and the proprietary interaction data those frameworks generate once the platform is live.

IP

Proprietary leadership frameworks

Years of leadership consulting, executive coaching, behavioural assessment and emotional intelligence research translated into competency frameworks, assessment rubrics and coaching methodologies the agents reason over.

DATA

A widening data advantage

Every assessment, coaching interaction, reflection and completed development journey improves personalisation and produces leadership analytics no competitor holds. The advantage grows with usage.

ENG

An engine built for coaching

A multi-agent architecture designed specifically for leadership development rather than general conversation — assessment, sequencing, rehearsal and evaluation are separate, inspectable responsibilities.

SEG

An underserved global segment

An optional Islamic emotional intelligence and leadership framework, grounded in Quranic principles and prophetic leadership models, serves a large market that Western-built platforms do not address at all.

Five ways the platform earns.

Subscription is the spine. Around it sit four streams that lift account value without adding proportional delivery cost — the reason agent-delivered coaching carries software margins rather than consulting margins.

REVENUE ARCHITECTURE

STREAM	BASIS	WHAT IT COVERS
Recurring subscription	Per seat, monthly	SaaS access for individuals and enterprise cohorts, including the admin console, team skills mapping and progress analytics.
Onboarding & setup	One-time	Account provisioning, workspace configuration, administrator training and migration of existing learning or coaching content.
Support & maintenance	Annual, % of subscription	Helpdesk access, security patching, infrastructure monitoring, uptime commitments and ongoing improvement of the agents and content libraries.
Customisation	Per project	Bespoke coaching agents trained on a client's own frameworks, tailored assessment models, custom dashboards and HRIS or LMS integration.
Revenue share	Partner split	Accredited coaches, subject-matter experts and channel resellers who bring clients onto the platform or deliver programmes through it.

Trained on work that already happened.

The frameworks inside the platform were not written for it. They come from leadership engagements delivered across government agencies, GLCs and multinationals in genuinely high-stakes sectors.

FANNIE MAE

FOUNDER & LEAD PRACTITIONER

Muhammad Javed

A leadership development specialist working at the intersection of emotional intelligence, strategic leadership and organisational transformation — and the source of the competency frameworks the agents are built on.

- International delivery across oil & gas, finance and technology sectors.
- HRDC-certified trainer and published author, *Nurturing Emotional Intelligence*.
- PhD candidate in advanced leadership research.
- Diagnostic practice built on IFA/EFA, emotional intelligence assessment and DISC profiling.

NEXT STEP

Leadership capability is a strategic priority now.

We are opening a limited number of enterprise design partnerships — organisations willing to shape the platform against their own leadership frameworks before general availability.
